

The maze

By: Yahya Ibrahim

What my project is about:

My project is about a player trying to beat the maze. Basically the player spawns at the beginning and then the player tries to go to the end of the maze, if the player goes to the end they win.

Commands

quit=leaves the game

retry=restart

No speech recognized=restart

A special thank you...

Thank you too all the people that helped me study this amazing app called 'snap' and also helped me do this project that turned out better than i thought it would. Thank you all!!! And have a great day!!!!

ABOUT ME

Hi! My name is Yahya, i am 12 years old and i live in kuwait. I like snap and that's why i wanna know more about it. I like it because its very easy to do project in it and to use stuff. Also you can use speech recognition which is a really good feature and it's my favorite one

About my experience with clevered

At first, i was learning AI, i thought it was interesting the only problem is i don't have much time now because i have school so i can't study ai or revise it and then i started to learn snap which is really easy and fun.

About my app(The Maze)

The maze is about a basic-looking maze that the player has to make the character touch the finish line. If the player accomplishes the goal, they win. Can you beat the maze?

This is a screenshot of my app

The End

The image features the words "The End" in a white, stylized script font with a black drop shadow. The text is centered within a black circle, which is part of a series of four concentric circles. The background is a light gray, heavily textured surface resembling stone or concrete. The overall composition is centered and symmetrical.
